

1.3 Discovering Migration

1986. Antigua & Barbuda. Imperforate Sheet of 12v - Seabirds of the World.

Most of the discoveries of migration have been made during the 20th century, but the arrival and departure of migrants has been observed for thousand of years. Early observers did not always understand what they saw, but they marveled at the seasonal changes and sometimes tries to explain them.

MIGRATION AMONG SEABIRDS

All seabirds spend a significant part of their lives at sea, and many experience many parts of the world's ocean as they *Migrate* around the globe every year. A vast migration is taking place. Offshore, over the Pacific and Atlantic Oceans, millions of seabirds are on the move.

IRRUPTION

It is another type of migration. Ornithologists generally concur that irruptions are triggered by **food shortages**, such as failure of the coniferous cone crops over a large geographic area, a common phenomenon in Peacocks. **COAT OF ARMS WITH STYLIZED BIRD.**
