

1.7 Resident & Non Migrants Birds

Bird migration is the regular seasonal movement, often north and south along a flyway, between breeding and wintering grounds. As some birds may be known to be migratory, there are also those that remain in the same areas throughout the year. These are known as residents or **non-migratory birds**. Eg Striated Heron. The **striated heron** (*Butorides striata*) also known as **mangrove heron**, **little heron** or **green-backed heron**, is a small heron, about 44 cm tall. Striated herons are mostly non-migratory .

2000. India, Saras Crane. 9th Definitive Series Fauna & Flora, Wmk Ashokan, Perf 13, Photogravure. 3 different marginal blocks of 20, with plate numbers and inscriptions on selvage . Extreme left block is imperforate on right margin, centre blocks has dramatic perforation shift and one extreme right is different paper and imperforate block.
