

3. Extreme Families

Great White Pelican (*Pelecanus onocrotalus*)

Attribute - Engaging in a short but not very sweet courtship

3.2 Shortest Courtship

EXTREME BIRDS

Geographical Distribution – Africa and Eurasia

↑ Issued on 24.10.196. A definitive with Composite color trial and color variety →

Moaning noises made by a group of male birds attract the unpaired females, who then walk past the group and after further calling and head up posturing the number of males gradually reduces to just one in the train. With this the pairing process is evidently complete. The pair proceeds to perform display, and later join part of colony known as laying group. But this pairing only persists for a single breeding attempt, and both birds acquire new partners a few months later.

The Story of My Pelican

Short story written By: Albert Schweitzer Displayed below is composite Imperf, color trials based on the said short story.

Stamp was Issued on 14.01.1955
