Stamp Issued at PHILEX
FRANCE 82

King Penguins are the **2nd largest species of penguin**. King Penguins don't make nests of any kind. They carry their egg around with them at all times on top of their feet. Once a young King Penguin does leave its colony it will not return until at least 3 years later when it's able to mate.

The pupil of a penguin's eye is circular. The king penguin has the longest breeding cycle of all the penguin species, lasting 14 to 16 months.
