

6. Extreme Form

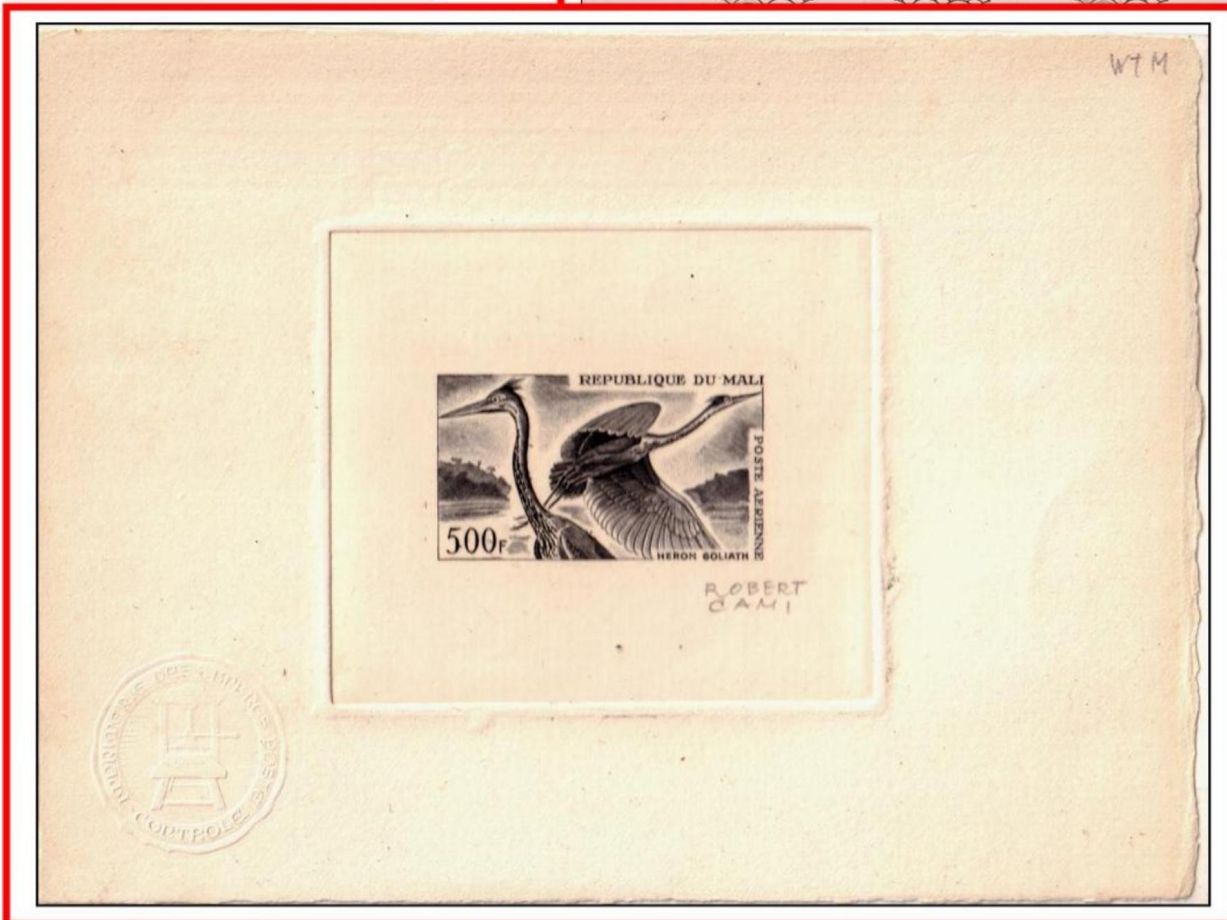

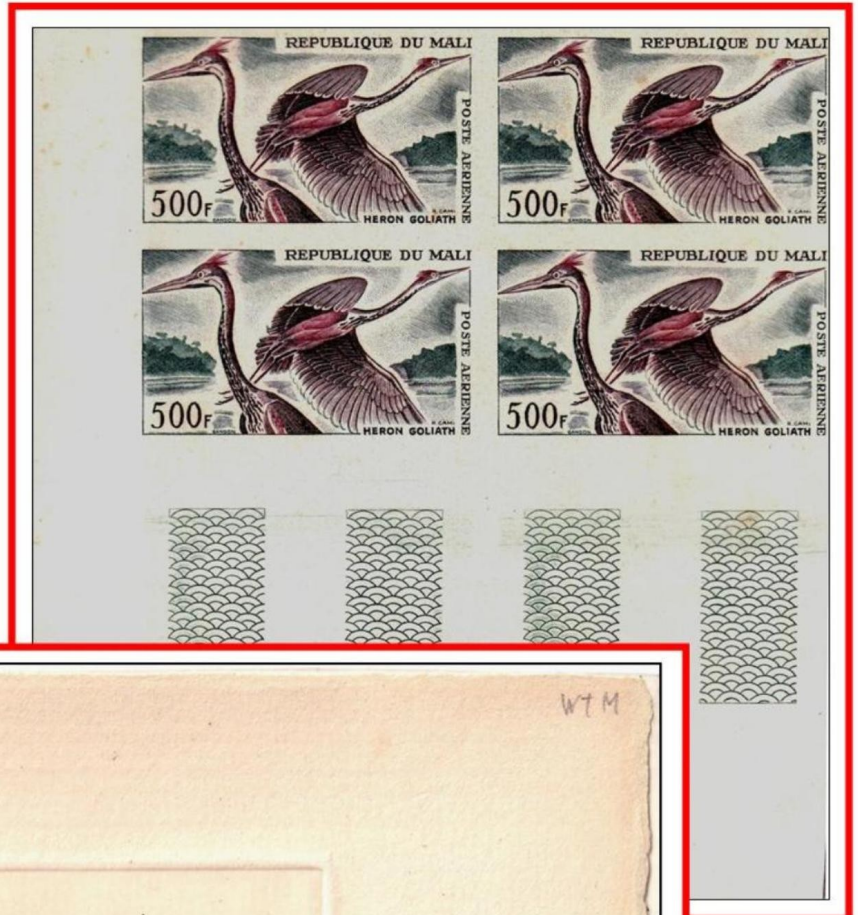

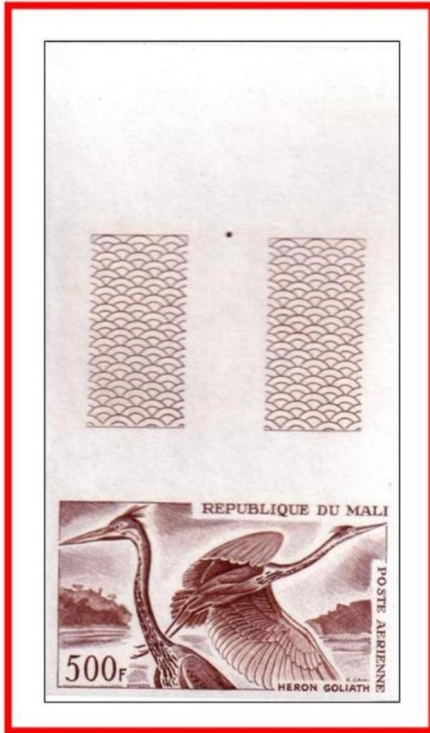

Goliath Heron (*Ardea goliath*)

Attribute - World's largest Heron

In flight it has a slow and rather ponderous look and, unlike some other herons, its legs are not held horizontally. Herons can be recognized by their long, S-shaped neck, dagger-like bill and long legs. Standing at 1.43m and with a wingspan of around 2m, the Goliath heron is the world's largest heron, weighs up to 9 kg.

6.11 Largest Wader

Geographical Distribution - sub-Saharan Africa
