

# MALARIA AWARENESS THROUGH INLAND LETTER (INDIA)

## INTRODUCTION:

Malaria is a mosquito borne disease that affects humans and other animals. Malaria is a disease caused by a plasmodium parasite, transmitted by the bite of infected mosquitoes. The severity of malaria varies based on the species of plasmodium. It is a life threatening disease. It is typically transmitted through the bite of an infected female Anopheles mosquito. The infected mosquito carry the plasmodium parasite. The mosquito bite introduces the parasites from the mosquito's saliva into a person's blood. The parasites travel to the liver where they mature and reproduce.

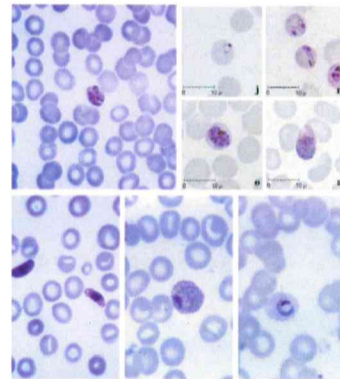

**FEMALE ANOPHELES MOSQUITO**

**Five species of Plasmodium (single-celled parasites) can infect humans and cause illness:**

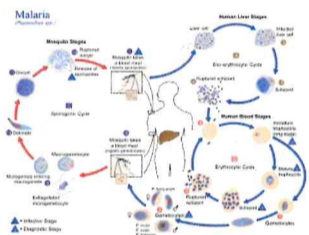

### Clockwise:

1. Plasmodium malariae (or P. malariare);
2. Plasmodium knowlesi (or P. Inowlesi);
3. Plasmoium falciparum (or P. falciparum);
4. Plasmodium vivax (or P. vivax);
5. Plasmodium ovale (or P. ovale)

People travelling to areas where malaria is common typically take protective drugs before, during and after their trip. Treatment includes anti - malarial drugs.

- ✗ **Causes:** Plasmodium spread by mosquitoes;
- ✗ **Symptoms:** Fever, Vomiting, Headache, Muscle aches & Tiredness
- ✗ **Prevention:** Mosquito nets; Repellent; Avoid stagnation of water; Insecticide sparing
- ✗ **Specialty:** Infectious disease

The symptoms are fever, tiredness, vomiting and headaches. In severe cases yellow skin, seizures, coma / death. Symptoms start 10 to 15 days after being bitten by an infected mosquito. The most dangerous one that causes deaths are caused by P. Falciparum. The P. Knowlesi rarely cause disease in humans. The others are milder versions. Malaria is diagnosed by microscope examination of blood using blood films / with antigen based rapid diagnostic tests.
