

The ideal habitat for mushrooms always remains the forest, in all its infinite varieties and in all its most articulated and complex expressions. However, there are areas that are more suitable than others for the growth of mushrooms and which therefore present themselves better for research and research collection; they are above all the clearings, the open, illuminated, ventilated spaces, in particular the so-called border strip between meadow and woods.

Issue: EUROPA 2011
Forests - Italy
Cancellation: Roma
09-05-2011, First day
Edition: Italian Post
